

TITLE

PLANT MYB TRANSCRIPTION FACTOR HOMOLOGS

ABSTRACT OF THE DISCLOSURE

This invention relates to an isolated nucleic acid fragment encoding a Myb-related
5 transcription factor. The invention also relates to the construction of a chimeric gene
encoding all or a portion of the Myb-related transcription factor, in sense or antisense
orientation, wherein expression of the chimeric gene results in production of altered levels of
the Myb-related transcription factor in a transformed host cell.
